Harrison R. Stone

Atlanta, GA 30327 | 4707280187 |HarryRobStone@gmail.com| US Citizen

Objective

Seeking a position in IC design, Verilog programming or software development. Looking to bolster community, apply knowledge, and solve problems that may occur in any workplace

Education

Georgia Institute of Technology | Atlanta, GA *January 2026 – Present*
Bachelor of Science in Computer Engineering Expected Graduation, Dec 2028

Kennesaw State University Honors College | Marrietta, GA *January 2024 – December 2025*
Transfer with 55 Credit Hours, GPA 4.0

Skills

Programming: Java, Python, C, VHDL, SQL, Assembly
Platforms: Linux (Ubuntu, Debian), Windows
Hardware: Raspberry Pi, oscilloscope
Software: GitHub
Languages: English

Experience

Kennesaw State University | GA, Marrietta *August 2025 – Present*
Research Partner / Department (if applicable)
Education and research institution

- Collaborated with Oak Ridge Research Facility to measure radioactive decay of coating on silicon wafer.
- Improved conductivity on the wafer by 129%

Chick-fil-A | Atlanta, GA *August 2019 – September 2022*
Associate
Food service organization

- Satisfied customer demands under time pressure, worked multiple different stations to fill in for struggling employees
- Learned communication skills and how to adapt to real-world group work, trained new hires

Projects

Graphics Processing Arduino *August 2024*
Solo Project
Project intention was to find a way to render images onto a small monitor using a compact manner. Arduino Uno provided a great option for acceleration of project pace and was effectively compact.

- Programmed an Arduino Uno with assembly to render images, including renders of 3D objects.
- Project moved to completion within 14 days.

Remote Controlled Drone | Kennesaw Nuclear Society *July - September 2025*
Project technician
Club needed drone to fly in time for next semester.

- Recycled 30% of semester's club funding into a flight capable drone
- Soldered, wired, and troubleshooted hardware, configured and calibrated flight controller using Betaflight

Relevant Coursework

Circuits Analysis I: Analysis, hardware debugging, learned to use oscilloscopes; critical theoretical thinking to solve complex circuits
Digital Logic Design: VHDL, Component creation, circuit creation, optimization of systems to account for potential constraints
Study Abroad in Taipei, Taiwan: Industry insight of the lifecycle of silicon in Taiwan

Leadership or Activities

Kennesaw Nuclear Society | Secretary *August 2025 – December 2025*

- Assisted in allocation and procurement of funds, toured power plants across the southeast collected 3 new members
